The Science of Long Term Pain Relief

@Curacorn

@Curacorn

Curacorn<sup>®</sup> is a revolutionary technique using a sterile gel injection to cushion painful corns or pressure areas in the foot from inside the skin.

The procedure can eliminate the need for bulky padding or frequent visits to your podiatrist to have corn or calluses cut away.

#### HOW MANY TREATMENTS ARE NEEDED?

The majority of patients see an improvement after just 1 treatment, some may require more than that.

Your individual treatment plan will be explained by your podiatrist during your initial assessment.

#### DOES THIS TREATMENT WORK ON ALL CORNS?

All corns or calluses form as a result of pressure from within the skin where the bony structures below rub the inner layers of the dermis. By injecting a sterile cushion between these layers, Curacorn can eliminate the skin's reaction to the pressure & callus does not form.

**PLEASE NOTE : YOU WILL BE REQUIRED TO ATTEND A CONSULTATION WITH YOUR CURACORN PODIATRIST PRIOR TO TREATMENT TO ASSESS YOUR SUITABILITY .**

#### HOW LONG DOES THE TREATMENT TAKE?

A Curacorn treatment usually takes the same time as your routine podiatry treatment although larger areas may require more time. Your podiatrist will discuss your individual requirements during your assessment.

#### IS THIS TREATMENT SUCCESSFUL?

Curacorn is used in many countries around the world with high levels of success. It has been shown to drastically reduce reoccurrence of stubborn corns & calluses. Every corn is unique, your podiatrist will discuss what you can expect from your treatment & how much gel will be needed to create a sufficient cushion inside the skin for you. Following Curacorn you will be asked to refrain from putting any pressure on the treated area for 48 hours. Keep the foot dry for 24 hours.

#### CAN I DRIVE AFTER THE TREATMENT?

A small amount of local anaesthetic will be administered prior to your treatment to ensure the maximum comfort during the procedure. Driving with anaesthetic in the foot is not permitted.

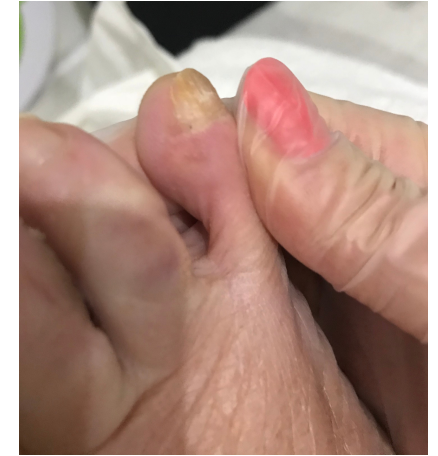

#### WHAT ARE THE BENEFITS OF CURACORN?

Curacorn can replace the need for padding or toe protectors which are unhygienic & bulky in the shoes. After treatment your corn may not form as quickly & could disappear all-together. Less podiatry clinic visits for callus removal, less pain, saving you money & time.

#### CAN UNDER 18'S HAVE THIS TREATMENT?

Treatment is restricted to patients over 18 years of age unless authorised by a doctor/ consultant. In patients below 18 the podiatrist will discuss your case with the doctor prior to proceeding.

(Price includes up to 3 treatment, if more treatments are needed an additional charge may be added)

#### Hear what patients have to say about Curacorn<sup>®</sup>

*'I feel like a new man I have started playing golf again something I stopped doing due to how painful my feet have been and wearing tight shoes was out of the question but now I have no worries and can enjoy a lot more things.'*

*'I havent had to have my corns treated in over a year this treatment is incredible. Thank you so much.'*

*'Since having Curacorn done I have been able to continue my life pain free it really is a fantastic treatment and I can honestly say my life has become easier and more enjoyable not having to worry about my feet stopping me'*
